

# Energy performance certificate (EPC)

|                                                                     |                           |                                                     |
|---------------------------------------------------------------------|---------------------------|-----------------------------------------------------|
| Flat 8<br>19 Derwentwater Terrace<br>Headingley<br>Leeds<br>LS6 3JL | Energy rating<br><b>C</b> | Valid until: <b>12 November 2034</b>                |
|                                                                     |                           | Certificate number: <b>9340-3817-5090-2894-5845</b> |

Property type

Top-floor flat

Total floor area

88 square metres

## Rules on letting this property

Properties can be let if they have an energy rating from A to E.

You can read [guidance for landlords on the regulations and exemptions \(https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-guidance\)](https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-guidance).

## Energy rating and score

This property's energy rating is C. It has the potential to be C.

[See how to improve this property's energy efficiency.](#)

The graph shows this property's current and potential energy rating.

**Properties get a rating from A (best) to G (worst) and a score.** The better the rating and score, the lower your energy bills are likely to be.

For properties in England and Wales:

the average energy rating is D  
the average energy score is 60

| Score | Energy rating | Current | Potential |
|-------|---------------|---------|-----------|
| 92+   | <b>A</b>      |         |           |
| 81-91 | <b>B</b>      |         |           |
| 69-80 | <b>C</b>      | 73 C    | 73 C      |
| 55-68 | <b>D</b>      |         |           |
| 39-54 | <b>E</b>      |         |           |
| 21-38 | <b>F</b>      |         |           |
| 1-20  | <b>G</b>      |         |           |

## Breakdown of property's energy performance

### Features in this property

Features get a rating from very good to very poor, based on how energy efficient they are. Ratings are not based on how well features work or their condition.

Assumed ratings are based on the property's age and type. They are used for features the assessor could not inspect.

| Feature              | Description                                              | Rating    |
|----------------------|----------------------------------------------------------|-----------|
| Walls                | Average thermal transmittance 0.17 W/m <sup>2</sup> K    | Very good |
| Roof                 | Average thermal transmittance 0.11 W/m <sup>2</sup> K    | Very good |
| Windows              | High performance glazing                                 | Very good |
| Main heating         | Air source heat pump, radiators and underfloor, electric | Good      |
| Main heating control | Programmer, room thermostat and TRVs                     | Good      |
| Hot water            | From main system                                         | Average   |
| Lighting             | Excelent lighting efficiency                             | Very good |
| Floor                | (other premises below)                                   | N/A       |
| Secondary heating    | None                                                     | N/A       |
| Air tightness        | (not tested)                                             | N/A       |

### Low and zero carbon energy sources

Low and zero carbon energy sources release very little or no CO<sub>2</sub>. Installing these sources may help reduce energy bills as well as cutting carbon emissions. The following low or zero carbon energy sources are installed in this property:

- Air source heat pump

### Primary energy use

The primary energy use for this property per year is 67 kilowatt hours per square metre (kWh/m<sup>2</sup>).

---

## Smart meters

This property had a **smart meter for electricity** when it was assessed.

Smart meters help you understand your energy use and how you could save money. They may help you access better energy deals.

[Find out about using your smart meter \(https://www.smartenergygb.org/using-your-smart-meter\)](https://www.smartenergygb.org/using-your-smart-meter)

---

How this affects your energy bills

An average household would need to spend **£992 per year on heating, hot water and lighting** in this property. These costs usually make up the majority of your energy bills.

You could **save £0 per year** if you complete the suggested steps for improving this property’s energy rating.

This is **based on average costs in 2024** when this EPC was created. People living at the property may use different amounts of energy for heating, hot water and lighting.

|                                                                                                             |                 |                                                                                                                                                   |                   |
|-------------------------------------------------------------------------------------------------------------|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| Impact on the environment                                                                                   |                 | This property produces                                                                                                                            | 0.6 tonnes of CO2 |
| This property’s environmental impact rating is A. It has the potential to be A.                             |                 | This property’s potential production                                                                                                              | 0.6 tonnes of CO2 |
| Properties get a rating from A (best) to G (worst) on how much carbon dioxide (CO2) they produce each year. |                 | You could improve this property’s CO2 emissions by making the suggested changes. This will help to protect the environment.                       |                   |
| Carbon emissions                                                                                            |                 | These ratings are based on assumptions about average occupancy and energy use. People living at the property may use different amounts of energy. |                   |
| An average household produces                                                                               | 6 tonnes of CO2 |                                                                                                                                                   |                   |

Steps you could take to save energy

The assessor did not make any recommendations for this property.

Who to contact about this certificate

Contacting the assessor

If you’re unhappy about your property’s energy assessment or certificate, you can complain to the assessor who created it.
